

## Twelve workflows we ship for Canadian industrial shops.

AI handles the busywork your senior people don't have time for. Two go live in 21 days. The other eight wait in your GitHub for when you're ready.

01

### RFQ to AI-drafted quote

BOM extracted from CAD or PDF drawings automatically. RFQ-to-quote in 2 hours instead of 3 days.

03

### ISO 9001 docs + audit prep

Friday afternoon: ISO 9001 audit on Monday. Sagepar pulls the documentation overnight. Monday morning you walk in with the binder ready.

05

### Inspection report from photos

Phone photo on the floor at 10am, finished inspection report by 10:05.

07

### Equipment manual Q&A

Trained on your specific machinery library. Operator question answered in seconds, not a call to the senior tech.

09

### Multilingual customer service

EN, FR, and Spanish email triage and draft replies, with technical-spec context pulled from your records.

11

### Content marketing engine

Last week's job becomes this week's case study. AI drafts LinkedIn posts and email campaigns from your project records. You review and approve.

02

### Tribal knowledge capture

Interview your retiring shop floor staff. Their answers become a knowledge base your team can search before you lose them.

04

### Drawing markup + revision tracking

Customer revisions tracked across PDF and CAD drawings. Old versions never sneak into production again.

06

### Cert of compliance generation

Truck leaves at 4pm. Cert of compliance is on the driver's clipboard at 3:45, no one chasing job sheets.

08

### Production scheduling assistant

Job book rebalanced before the morning shift. Material shortages flagged the night before, not at 10am when the operator hits a missing part.

10

### Vendor portal + PO matching

Every vendor email and portal update matched to its open PO. Missing acknowledgements flagged before they cost you.

12

### Targeted prospect outreach

Twenty-five lookalike prospects identified each week from your best customers. AI drafts personalized outreach. You review and click send.

#### // HOW FOUNDATION WORKS

#### DAYS 1-3

Audit and planning. We map your stack, interview your people, pick two workflows from this menu.

#### DAYS 4-15

Build, integrate, and ship workflow one. ERP, Microsoft 365, monitoring, alerts. Your team starts using it.

#### DAYS 16-21

Workflow two live. Runbook delivered. Loom walkthrough recorded. The Sagepar agent system is yours.

#### MONTH 2+

One new workflow shipped per month. Model upgrades, prompt tuning, monitoring. 24h SLA.

#### // NEXT STEP · GET YOUR OPERATIONS AUDIT · [sagepar.com/audit](https://sagepar.com/audit)

A 15-page report on your top five automations, ranked by hours saved per week. Or book a 30-minute fit call. We'll talk through your specific stack.
